

Robert Koprowski

Senior Software Engineer · Full-stack TypeScript & AI products

e-mail: robert[at]koprowski.io | location: Gdańsk, Poland · remote

// PROFILE SUMMARY

- Full-stack software developer with 13+ years of experience building web applications, front end and back end.
- Nearly a decade working day-to-day with JavaScript and TypeScript (Node.js, NestJS, React, Next.js) and, more recently, AI-powered products.
- Strong grounding in object-oriented programming, design patterns and agile workflows (Scrum, Kanban).
- Comfortable across Linux, macOS and Windows; experienced with relational (PostgreSQL, Oracle) and non-relational (Redis, Cloud Firestore, Firebase) databases.

// EDUCATION

BEng(Hons) Artificial Intelligence and Software Engineering

2008 – 2012

The University of Edinburgh, Scotland

// TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Java, SQL, Bash, HTML, CSS
Technologies	Node.js, NestJS, Express.js, React, Next.js, Firebase Functions
AI / LLM	LLM-powered product development, prompt engineering, AI agents
Cloud & DevOps	AWS, CI/CD, Jenkins, TeamCity, Git, GitHub
Databases	PostgreSQL, Redis, Cloud Firestore, Firebase Realtime Database, Oracle
Concepts	Object-Oriented Programming, Design Patterns, RESTful APIs, Agile (Scrum, Kanban)
Tools	JIRA, WebStorm, IntelliJ, Linux, macOS, Windows

// EXPERIENCE

Strella

Senior Software Engineer · August 2024 – now

Early-stage startup building an AI-powered customer research platform that runs AI-moderated interviews at scale and synthesises them into actionable insights for product, design and UX research teams.

- Worked on the team building the real-time voice AI agent (LiveKit) that conducts the platform's interviews, including multi-language speech via OpenAI, Google and Gemini.
- Designed its cloud deployment and autoscaling on GKE – consolidated CI/CD for staging and production, with horizontal autoscaling driven by active concurrent calls rather than CPU/memory.
- Contributed across the Next.js product to interview, recording and playback features – including LiveKit egress lifecycle tracking and the GCS recording & transcription pipeline (AssemblyAI).
- Built application-wide LLM cost telemetry, instrumenting model call sites across the app for per-call cost tracking.

Tech: TypeScript, Next.js, React, Python, LiveKit, OpenAI/Gemini, Prisma, PostgreSQL, GCP (GKE)

Bright Inventions

Senior Fullstack Developer · May 2021 – August 2024

Custom software house specialising in web, mobile, Blockchain and IoT. Worked on two main products: Bright Treasury, a blockchain treasury & proposal management app, and a TMS (Transport Management System) for a logistics company.

Tech: TypeScript, React, NestJS, Node.js, AWS, PostgreSQL

Schibsted Tech Polska

Backend Developer · October 2019 – April 2021

Maintained and developed the backend of a mobile dating app serving 30k+ monthly active users.

Tech: JavaScript, Node.js, firebase-functions, Cloud Firestore, Firebase Realtime Database, Redis, TeamCity

PBSC Urban Solutions

Full Stack Developer · November 2016 – July 2019

Full-stack development of software for bike-sharing systems operated across Canada, the US, Mexico, the UK and Australia.

Tech: JavaScript, Node.js, jQuery, HTML, CSS, Jenkins, Maven, GitLab

Motorola Solutions

Software Engineer · June 2014 – August 2016

Built Java and Python web applications used to upgrade complex, mission-critical distributed systems.

Tech: Java, Spring, Hibernate, Wicket, JUnit, JavaScript, Python, Tomcat, Jenkins, Maven

SmallGIS

Java Developer · November 2012 – May 2014

Developed GIS web applications for public-sector clients, including EMUiA – Poland's national register of cities, streets and address points.

Tech: Java, Google Web Toolkit, Hibernate, JSP, SQL, Oracle, PostgreSQL, Python, SVN

// ADDITIONAL INFORMATION

Languages: Polish (native), English (fluent)
